

**Position Title: SOFTWARE APPS ENGINEER - SENIOR (JAVA Programming)**

**Reports to:** IT Manager

**Overview:** We are seeking an experienced Software Apps Engineer to develop, improve, and maintain software applications to automate our business processes related to our ERP and WMS. The first project will be to use Java and related technologies to develop a customer portal based on the e-Sales product from Lawson. You will need to use Java to make modifications to Lawson M3 ERP system as needed.

The successful candidate must have strong capabilities to understand business processes and create new automation solutions to improve these processes.

**Education and Experience:**

- University degree in Computer Science or related discipline.
- At least 3-5 years working experience in a related field.
- Strong skills in software development and business analysis.
- Extensive and current hands-on experience with Java and web applications.
- Web application development experience, exposure to Rich Internet Application (RIA).
- Advanced understanding of relational database design and development.
- Knowledge of and experience with Lawson M3 (Java Version).

**Required skills:**

- Java/JSP/JavaScript, MAK, Eclipse, XML / HTML, SQL, WebSphere Application Server and Web Services.
- MS SQL Server stored procedures and triggers.
- Ability to work independently with little supervision in a team environment.
- Good verbal and written communication skills and ability to master new technology on your own.
